# DocumentStatusReport2.ProcessingResultRemarks Property

An array of initial processing codes or `null`.

**Namespace:** [Au10tix.Bos.Proxy.BosResults](#)

**Assembly:** Au10tix.Bos.Proxy (in Au10tix.Bos.Proxy.dll) Version: 2506.200.0.2 (2506.200.0.2)

## ▲ Syntax

C#	VB	C++	F#
----	----	-----	----

```
public int[] ProcessingResultRemarks { get; set; }
```

[Copy](#)

Property Value

[Int32\[\]](#)

## ▲ Remarks

The following list describes processing result remark codes.

Code	Description
0	Authentication tests were successfully completed.
20	One or more authentication tests failed.
40	One or more authentication tests yielded inconclusive results.
50	Authentication tests were performed on only one side of the document.
55	The back side was classified based on barcode recognition.
60	No authentication tests were applicable for this document type; only document data was extracted.
80	Data extraction was performed as per client request.
100	The document has expired.
120	The quality of the document image is too low.
121	The document image is blurry.
122	The document image is too dark.
123	The document image has excessive light exposure.
124	The document image has unacceptable saturation levels.
130	Certain authenticity checks were not completed.

Code	Description
140	The pages of the multi-page document do not match.
160	The processing request was rejected.
180	The document could not be recognized.
200	Multiple quality issues prevented data extraction and authentication.
220	The document is not identified as an ID.
230	The request was denied due to poor image quality.
250	The document is listed as blocked.
260	The document is flagged.
280	A second side is required for this ID type.
300	A second side is not supported for this ID type.
320	The second side was ignored as it is irrelevant to the document.
340	A barcode was expected but could not be extracted due to quality issues.
360	A barcode was expected but could not be decoded.
380	Exception Management was triggered based on a predefined customer rule.
400	The document was processed by Exception Management.
420	Exception Management identified two images in the same file.
440	Exception Management detected that the document is incomplete.
460	Exception Management could not recognize the document or its language.
480	Exception Management identified the document as a black-and-white image.
500	Pages are missing or mismatched.
520	Exception Management detected that the document or its language was destroyed.
540	The document was recognized, but no data was extracted and no authentication tests were performed.
550	The Exception Management request failed.
560	The Exception Management service is unavailable.
580	The Exception Management service timed out.
600	The daily Exception Management quota has been exceeded.
620	Face comparison request was forwarded to Exception Management.
640	Face comparison request was processed by Exception Management.

Code	Description
660	One or more fields could not be read or were partially extracted due to poor readability.
700	The declared country or ID type does not match the uploaded ID.
720	Only BOS results are available because the Exception Management SLA has been exceeded.
740	Exception Management detected that the document is not permitted by the customer.
760	The document is identified as a digital ID; no authentication tests were performed.
780	Personal information fields have been masked per request.
800	Front side missing.
820	No authenticity tests were defined for the document.
840	Manual Inspection detected Document Replay Screen.
860	Manual Inspection detected Document Replay Paper.
880	Manual Inspection detected Document Replay Digital.
900	Manual Face Comparison result superseded NIST Face Comparison result.
920	Face not detected on document.
930	Face not detected on selfie.
940	Identified as Deepfake.
960	Missing Proof Of Address data in user input.
1440	Enhanced checks were done by face comparison service.
1580	The digital signature has expired.
1600	The digital signature is validated.
1620	This value is deprecated.
1640	The digital signature is bad or broken
1660	The digital signature is unsupported or can not be validated.
1680	This value is deprecated.
1700	This value is deprecated.
1720	Successful data extraction from external vendor.
1740	Data extraction from external vendor failed.
1760	The digital document is forged.
1780	No cryptographic signature to retrieve.

Code	Description
1800	Some forgeries prevent manual inspection.
1820	The document was processed by Serial Fraud Monitor
1840	Deepfake test was not executed due to poor image quality
1860	Liveness test was not executed due to poor image quality
1880	The photo gender does not match the gender in document
